Using the AIX Lab-Atlas skills

in Claude Code

Version	3
For	Designers using Claude Code in the Claude desktop app. No terminal needed. Setup takes about 5 minutes, once.
Source	https://github.com/RPalis/AIXLab-Atlas. This is a team guide, not an official Anthropic document.
Use	Internal. Do not share outside the team.

What you are setting up

AIX Lab-Atlas installs as one Claude Code plugin with all 30 skills. After the install, every skill runs with the plugin name in front, for example `/aix-lab-atlas:audit` or `/aix-lab-atlas:brief`. There is nothing else to download.

Step 1. Install in one go

1. Open the Claude desktop app (claude.com/download if you do not have it), sign in, open the **Code** tab, and choose your project folder.
2. In the prompt box, type this line and press Enter. If it asks you to confirm adding the marketplace, confirm.

```
/plugin install aix-lab-atlas --marketplace RPalis/AIXLab-Atlas
```

1. When the plugin details open, choose **Install for you (user scope)**. This makes the skills available in every project.
2. Turn on automatic updates so you always have the latest skills: type `/plugin`, open **Marketplaces**, select **aix-lab**, then **Enable auto-update**.

> **CHECK** Type `/aix-lab-atlas:` and the list shows the skills, such as `/aix-lab-atlas:setup`, `/aix-lab-atlas:brief`, `/aix-lab-atlas:persona` and `/aix-lab-atlas:audit`. If it shows none, type `/reload-plugins`. If the install line is not recognised, update the Claude app and try again.

Step 2. Use a skill

Type `/aix-lab-atlas:`, the skill name, and an optional mode or idea, then send. Not sure where to start? Send `/aix-lab-atlas:help`. It reads your project's files and recommends the next one to three skills.

```
/aix-lab-atlas:help
/aix-lab-atlas:brief an app to share weekly meal plans with housemates
/aix-lab-atlas:audit craft
```

You can also just ask: "Run the audit skill in craft mode" does the same thing. A skill that needs a mode asks for it if you do not give one.

Phase	Skills (modes in brackets). Type /aix-lab-atlas: before each name.
Before Discover	`setup`, `brief`
Discover	`workshop` [plan, ingest], `competitor-analysis` [discover, add, analyse], `ux-benchmark`, `interview`, `interview-analysis`, `persona` [card, day], `journey` [map, blueprint, pain-points, solutions, experience], `problem-statement`, `metrics`
Decide	`brainstorming`, `information-architecture`, `map` [objects, site, flow, audit, document], `interrogate`, `decisions`
Design	`prototype`, `styleguide` [default, forge], `audit` [craft, heuristic, code, spec, a11y], `refine`, `storybook`, `figma` [capture, import, sync]
Deliver	`usability-test-plan`, `package` [full, lite], `showcase`, `guide`, `requirements`
Any time	`wiki` [compile, note], `skill-manager`

Audit modes: `craft`, `heuristic`, `a11y`, `code`, `spec`. Audit only finds problems; run `/aix-lab-atlas:refine` to fix them.

Rules

- **Plan first.** Turn on plan mode (the mode selector near the prompt box, or Shift+Tab). Claude shows a plan and waits for your yes.
- **No invented evidence.** No made-up people, quotes, numbers or competitors. Missing facts go in `UNKNOWNS.md`. Label a guess as a guess and name the source of every finding.
- **Stay in scope.** Practise on an invented idea in a folder of your own, never client material. Never paste passwords, keys or tokens into a chat.

To enforce these, paste before a skill run:

```
Use only files in this project and the skill's own SKILL.md. Do not invent users, quotes,
numbers, competitors or screens. If something is missing, add it to UNKNOWNS.md and ask m
e.
Show me a plan first and wait for my yes before creating or changing files. Name the sourc
e
file for every finding. If you guess, say it is a guess.
```

How to: design systems

Foundations means colour, type, spacing, radius and shadow in light and dark, with no components.

1. Connect a design system from Git

1. Open the project's folder in the **Code** tab. For a React component library, type `/design-sync` and follow the prompts. A large library can take a long time and may ask you to confirm the cost. Then open claude.ai/design, check the system under **Settings > Design systems**, and turn on **Published**.
2. For any other code, type `/aix-lab-atlas:styleguide` and send: `Audit and document the design tokens in this project. Do not change any value.` Read the `DESIGN.md` it writes. Anything unclear goes on a line in `UNKNOWNS.md`.

2. Create a design system (foundations only)

1. Type `/aix-lab-atlas:styleguide` and send: `Foundations only: colour, typography, spacing, radius and shadow, light and dark. No components.` Add `Use forge mode.` for a real brand, and give it your sources: a website, a brand guide, or hex codes. If two sources disagree it asks which wins.
2. It writes `src/index.css`, the Tailwind mapping and `DESIGN.md`. With no project yet, it returns the text for you to save as files.

> **CHECK** No hard-coded colours outside `index.css`, and `DESIGN.md` exists. To pull a Figma library into tokens, use `/aix-lab-atlas:figma` with the connector the AIX-Lab support channel sets up once.

If something goes wrong

What you see	What to try
The marketplace or plugin is not found	Check the install line was typed exactly. If it still fails, call the AIX-Lab support channel.
Typing `/aix-lab-atlas:` shows no skills	Type `/reload-plugins`. Then type `/plugin`, open **Installed**, and check **aix-lab-atlas** is enabled.
A skill writes before showing a plan	Type: stop, show me your plan first.
Anything else	Call the AIX-Lab support channel.
