AIX Lab-Atlas

Onboarding: quick start (both tracks)

Repository	https://github.com/RPalis/AIXLab-Atlas. Internal use. Do not share outside the team.

1. Before you start

Item	Link
GitHub account (free), for routes A and B	github.com/signup
Track 1: Claude desktop app and a paid Claude plan (or a Console account).	claude.com/download, claude.com/pricing
Track 2: a Claude account on a plan with Claude Design (Pro, Max, Team or Enterprise; an Enterprise admin must enable it), and access to the GitHub repository	claude.ai/design
An empty folder called `atlas-practice` (Track 1) and an **invented** product idea, for example an app to share weekly meal plans with housemates. Never a client idea.	Create the folder on your Desktop

2. Seven safety rules

- **G1** Work only in `atlas-practice`. **G2** Never paste passwords, keys, tokens or real user data; sign in to services in your browser.
- **G3** Keep Claude on "ask before editing"; never use bypass or auto-accept. **G4** Plan first: if a skill writes before showing a plan, type: stop, show me your plan first.
- **G5** No invented evidence: no persona, quote or number without a source, otherwise "unknown". **G6** Read each output before the next skill.
- **G7** Stop and tell the observer if a file appears outside `atlas-practice`, Claude asks for a password or token, or you are stuck for 5 minutes.

3. Get the files (pick one route)

Route	Steps
A: invited	Email **RPalis invited you to collaborate on RPalis/AIXLab-Atlas** > **View invitation** > sign in with the invited account > **Accept invitation** > green **Code** > **Download ZIP** > unzip. Shortcut while signed in: `https://github.com/RPalis/AIXLab-Atlas/archive/refs/heads/main.zip`. "404" means the wrong GitHub account.
B: public	Open https://github.com/RPalis/AIXLab-Atlas > green **Code** > **Download ZIP** > unzip.
C: ZIP sent to you	Save it, then unzip: double-click on a Mac, **Extract All** on Windows.

> **CHECK** The unzipped folder contains `skills`, `README.md` and `install.sh`.

4. Install and check

Track 1: Claude Code (checked on macOS)

1. Install the Claude desktop app from claude.com/download, sign in, and open the **Code** tab.
2. Open **Terminal** (Cmd+Space, type Terminal). Type `cd ` plus a space, drag the unzipped folder onto the window, press Enter. Run `./install.sh --claude --no-open` (if "permission denied", run `chmod +x install.sh` first).
3. In the Code tab choose `atlas-practice` as the working folder. Turn on plan mode (Shift+Tab, or the mode selector). Type: `Use the AIX Lab-Atlas help skill and tell me which skill to run first.`

> **CHECK** The installer ends with "Successfully installed 30 skills!". Typing `/` lists skills such as `setup`, `brief`, `persona`, `audit`. Claude names `setup` for an empty folder. If `/help` opens Claude's own help, use the sentence above. On Windows, ask the team for the install steps.

Track 2: Claude Design

1. In a Claude Design project send: `Connect the GitHub repo RPalis/AIXLab-Atlas, branch main.` (A private repository asks you to install the GitHub App.)

2. Send: `Copy the whole skills/ folder from RPalis/AIXLab-Atlas into this project, keeping the folder structure.` If the project already has a `skills/` folder, delete it first so no old copy remains.
3. Send: `Create CLAUDE.md at the project root with exactly this text`, then paste the command rule from step 3 of the Claude Design skills sheet. Repeat in every new project.
4. Send: `/help atlas`.

> **CHECK** `skills/help/SKILL.md` exists and `/help atlas` lists the skills. Typing `/` shows no list in Claude Design: that is expected, the rule file makes the commands work. Skills that need a shell (`prototype`, `package`) need Claude Code.

5. First run: plan, execute, audit

1. **Plan.** Track 1, in plan mode: `Use the setup skill. Project: <your invented idea>. Starting point: brand-new idea.` Track 2: send `/brief <your idea>` the same way. Read the plan. If it names anything outside `atlas-practice`, stop (G7). Approve each file change one at a time.
2. **Execute.** Run `brief`. Answer one question at a time; say "I don't know" when you do not. Each one must land in `UNKNOWNS.md` (Track 2: an Unknowns list), never as an invented answer.
3. **Test the guardrail.** Run `persona` in `card` mode with no research. Correct: it refuses and asks for research. Defect: it writes a persona with names and quotes. Tell the observer at once.
4. **Audit.** Track 1: run `audit` in mode `craft` (scored critique), `heuristic` (12-point Nielsen), `a11y`, `code` or `spec`. Track 2: make one screen in Claude Design, then send `/audit craft`. Mark each finding **accept**, **reject** or **unsure**. Nothing is fixed until you say so.
5. **Review.** Read what you produced, close the session, and fill in `onboarding/FEEDBACK-FORM.md`.

6. Do you have a design system? (Track 1; advice, never a blocker)

Situation	Run	Result
A. Tokens already in code	`styleguide`, audit what exists	`DESIGN.md` from your real tokens
B. A brand, no system	`styleguide` in `forge` mode, with sources	Tokens traced to sources
C. A Figma library only	Figma MCP server, then `figma` `import` and `sync`	Code that follows the library
D. Nothing yet	`styleguide`, default mode	Placeholder palette, labelled "placeholder tokens"

7. If something goes wrong

Problem	Fix
Typing `/` shows no skills	Quit Claude fully, reopen, check the installer said 30 skills.
`/help` opens a different help screen	The built-in wins. Type: Use the AIX Lab-Atlas help skill.
A skill writes before showing a plan	Type: stop, show me your plan first. Tell the observer.
Claude asks for a password or token	Do not enter it. Stop and tell the observer.
GitHub shows 404, or a Claude Design command does nothing	Switch to the invited account. Or check step 3 was done in this project and `skills/<name>/SKILL.md` exists.

> **NOTE** Connectors (MCP servers) are not needed for a first run. Setup steps are in the full Track 1 document.
