Installing the AIX Lab-Atlas skills

Click by click: Claude Code, Chat and Claude Design

Version	4
For	Designers installing the skills for the first time. Pick Part A (Claude Code and Chat) or Part B (Claude Design). About 10 minutes each.
Source	https://github.com/RPalis/AIXLab-Atlas. This is a team guide, not an official Anthropic document.
Licence	MIT. Free to use, with the licence notice.

Before you start

- A Claude account on a paid plan (Pro, Max, Team or Enterprise). Claude Design needs a plan that includes it; on Enterprise an admin must switch it on.
- No GitHub account and no terminal are needed.
- Use a practice folder and an invented product idea. Never client material.

Part A. Claude Code and Chat (Mac and Windows)

A1. Install the Claude desktop app

1. Open claude.com/download in your browser.
2. Click the download for your computer: **macOS**, or **Windows** (x64; choose arm64 only if you know your PC uses it).
3. Open the downloaded file. **Mac:** drag **Claude** into **Applications**, then open it from there. **Windows:** run the installer and wait until it finishes.
4. Click **Sign in** and sign in with your Claude account.

> **CHECK** You see the Claude app's main screen with a **Code** tab.

A2. Add the skills (once per account)

1. In the Claude app, click **Customize**, then **Plugins**. (In a browser, open claude.ai/customize/plugins.)
2. Click **Add**, then **Add marketplace**.
3. Type `RPalis/AIXLab-Atlas` and confirm.
4. When the marketplace opens, find **AIX Lab-Atlas** and click **Add**.

> **CHECK** AIX Lab-Atlas is in your plugins list. It is saved to your account, so you do not repeat this in each project, in Chat or in Claude Code.

A3. Open Claude Code in a practice folder

1. Create an empty folder called `atlas-practice` on your Desktop. **Mac:** right-click the Desktop, **New Folder**. **Windows:** right-click the Desktop, **New > Folder**.

2. In the Claude app, click the **Code** tab.
3. Under the prompt box, click the project folder control and choose `atlas-practice`.
4. Turn on plan mode: use the mode selector near the prompt box, or press **Shift+Tab** until it says plan mode.

A4. Check that it worked

1. In the **Code** tab, start a new session. Type `/aix-lab-atlas:`. A list of the skills appears. If it does not, type `/reload-plugins` and press **Enter**.
2. Send `/aix-lab-atlas:help`. For an empty folder, Claude names `/aix-lab-atlas:setup` as the first skill, and shows a plan.
3. In **Chat**, start a new chat, type `/` and then `aix-lab-atlas`. The skills are listed.

> **CHECK** Typing `/aix-lab-atlas:` lists skills such as `setup`, `brief`, `persona` and `audit`. Every Claude Code command starts with `/aix-lab-atlas:`. To get new skill versions sooner, open **Customize > Plugins**, open the marketplace and click **Check for updates**; turn on **Sync automatically** if you see it.

A5. If Add marketplace is not available (fallback)

Use this only if A2 is not possible. Use one route only, or every skill appears twice.

1. In the **Code** tab prompt box, paste this line and press **Enter**. Confirm the marketplace if asked, choose **Install for you (user scope)**, then type `/reload-plugins`.

```
/plugin install aix-lab-atlas --marketplace RPalis/AIXLab-Atlas
```

Still not recognised? Copy the folder instead:

1. In your browser open https://github.com/RPalis/AIXLab-Atlas, click the green **Code** button, then **Download ZIP**. Unzip it: **Mac** double-click, **Windows** right-click then **Extract All**.
2. Quit the Claude app. Open your `.claude` folder. **Mac:** in Finder press **Cmd+Shift+G**, type `~/.claude`, press Enter. **Windows:** press **Win+R**, type `%USERPROFILE%\.claude`, press Enter.
3. If there is no `skills` folder, create one with that exact lowercase name. Open the unzipped download, open its `skills` folder, select all 30 folders (**Cmd+A** or **Ctrl+A**) and drag them into the `skills` folder. If asked, choose to replace.
4. Reopen the app and the **Code** tab. Type `/` and check the skills are listed. In this route the commands have no prefix, for example `/audit`.

Part B. Claude Design

B1. Open a project

1. In your browser open claude.ai/design and sign in with your Claude account.
2. Open a project: click the button to start a new project, or open an existing one. Button names may differ slightly. You now see a chat box.

B2. Connect the repository

1. Click in the chat box, paste this message and press **Enter**: `Connect the GitHub repo RPalis/AIXLab-Atlas, branch main.`

2. If a repository picker appears, choose `RPalis/AIXLab-Atlas`.
3. Send: `List the repository's skills/ folder.`

> **CHECK** Claude lists the skill folders, for example `audit`, `brief` and `persona`.

B3. Copy the skills into the project

1. If this project already has a `skills/` folder from an earlier copy, send: `Delete the skills/ folder in this project.` An old copy is the only way to end up with retired or duplicate skills.
2. Send: `Copy the whole skills/ folder from RPalis/AIXLab-Atlas into this project, keeping the folder structure.`
3. Send: `List the project's top-level folders. Every skill must sit at skills/<name>/SKILL.md.`
4. If the folders landed at the project root, send: `Move all of them under skills/.`

> **CHECK** `skills/help/SKILL.md` exists, and `skills/` holds exactly 30 folders.

B4. Add the rule file

This file makes `/audit` and the other commands work. Send: `Create CLAUDE.md at the project root with exactly this text.` Then paste the whole block below.

```
# Skill commands
The folder `skills/` holds the AIX Lab-Atlas skill suite (copied from RPalis/AIXLab-Atla
s).
When a user message starts with `/<name>` (for example `/help`, `/showcase`, `/audit craft
`),
treat it as a command to run that skill:
1. Read `skills/<name>/SKILL.md`. Read its `references/` and `templates/` files as the
   skill instructs.
2. Follow it exactly, using any word after the name as the mode or argument (`/audit a11y`
   means audit in a11y mode; `/brief meal plans for housemates` passes the text as the ide
a).
3. Do not answer that `/` commands are unsupported.
4. `/help` with no argument runs help's default mode. `/help atlas` runs atlas mode.
5. If `skills/<name>/` does not exist, list the folder names in `skills/` and ask which
   one was meant.
6. Each skill has an `## Environment` section. If it needs something this project does not
   provide, such as a shell or Node.js, say so, return the output in the conversation, and
   never claim a file was written or a command run when it was not.
The skill's `docs/...` paths mean this project's docs folder. The skill's own Output
Discipline applies: short, bullet-first chat replies.
```

B5. Check that it worked

1. Send `/help atlas`. Claude lists the skills by phase.
2. Typing `/` in Claude Design shows no list of skills. That is expected: the rule file makes the commands work when you type the full command and send it.

> **CHECK** `/help atlas` returns the skill directory. Repeat B2 to B4 in every new project.

If something goes wrong

What you see	What to try
Part A: no **Add marketplace** in **Customize > Plugins**	Update the Claude app and try again. Still no? Use fallback A5.
Part A: typing `/aix-lab-atlas:` shows no skills	Start a new session or type `/reload-plugins`. Then **Customize > Plugins**, check AIX Lab-Atlas is on.
Part B: Claude cannot see the repository	Call the AIX-Lab support channel.
Part B: `skills/` has more than 30 folders, or holds `competitors`, `scaffold`, `customer-journey`, `design-qa` or `user-flow`	Old copy. Delete `skills/` and repeat B3.
Part B: a command does nothing	Check B4 was done in this project and `skills/<name>/SKILL.md` exists.
Anything else	Call the AIX-Lab support channel and say which step you were on.
