AIX Lab-Atlas

Start here: one install, three places to work

Version	4
Repository	https://github.com/RPalis/AIXLab-Atlas. MIT licence.

1. Before you start

Item	Link
A Claude account on a paid plan (Pro, Max, Team or Enterprise). Claude Design needs a plan that includes it; on Enterprise an admin must enable it.	claude.com/pricing
The Claude desktop app for Mac or Windows. Step 0 and Chat also work in a browser at claude.ai.	claude.com/download
An **invented** product idea to practise on, for example an app to share weekly meal plans with housemates. Never client material. For Claude Code, an empty folder `atlas-practice` on your Desktop.	No terminal and no GitHub account needed

2. Seven safety rules

- **G1** Work only in `atlas-practice`. **G2** Never paste passwords, keys, tokens or real user data; sign in to services in your browser.
- **G3** Keep Claude on "ask before editing"; never use bypass or auto-accept. **G4** Plan first: if a skill writes before showing a plan, type: stop, show me your plan first.
- **G5** No invented evidence: no persona, quote or number without a source, otherwise "unknown". **G6** Read each output before the next skill.
- **G7** Stop and call the AIX-Lab support channel if a file appears outside `atlas-practice`, Claude asks for a password or token, or you are stuck for 5 minutes.

3. Step 0: add the skills (once per account, about 3 minutes)

1. Open the Claude desktop app (or claude.ai) and sign in.
2. Click **Customize**, then **Plugins**.
3. Click **Add**, then **Add marketplace**. Type `RPalis/AIXLab-Atlas` and confirm.
4. Open the marketplace, find **AIX Lab-Atlas** and click **Add**.

> **CHECK** AIX Lab-Atlas is in your plugins list with its skills. It is saved to your account, so Chat and Claude Code both get it. Claude Code loads it in your next session (or type `/reload-plugins`). Updates arrive on their own. Button names may differ slightly; the full steps are in the **Install click-by-click** guide, Part A.

4. Lane 1: Claude Code, in your projects

1. In the **Code** tab choose your project folder (for practice, `atlas-practice`). Turn on plan mode: the mode selector, or Shift+Tab.
2. Type `/aix-lab-atlas:` and the skills appear. Send `/aix-lab-atlas:help`: for an empty folder it names `/aix-lab-atlas:setup` first and shows a plan.

> **NOTE** Every Claude Code command starts with `/aix-lab-atlas:`, for example `/aix-lab-atlas:brief` or `/aix-lab-atlas:audit craft`. No skills listed? Start a new session or type `/reload-plugins`.

5. Lane 2: Claude Chat, in your Projects

1. Open **Chat** in the app or at claude.ai. For project work, start the chat inside a **Project** and add your notes and research files to it.
2. Type `/`, then `aix-lab-atlas`, and pick a skill. Or just ask: "Use the audit skill in craft mode on this screenshot."

> **NOTE** Chat cannot run a shell or edit files on your computer. Skills return their documents in the conversation for you to save. Skills that need a shell (`prototype`, `package`, `storybook`, `showcase`, `skill-manager`) say so and stop: run those in Claude Code.

6. Lane 3: Claude Design

Claude Design has no plugins, so its skills are copied into each project once. Follow **Part B** of the Install click-by-click guide: connect `RPalis/AIXLab-Atlas`, copy `skills/`, add the rule file, then send `/help atlas`. Typing `/` shows no list there; that is expected.

7. First run: plan, execute, audit

1. **Plan.** Claude Code, in plan mode: `/aix-lab-atlas:setup Project: <your invented idea>. Starting point: brand-new idea.` Chat: `Use the brief skill. My idea: <your idea>.` Claude Design: `/brief <your idea>`. Read the plan. If it names anything outside `atlas-practice`, stop (G7).
2. **Execute.** Run `brief`. Answer one question at a time; say "I don't know" when you do not. Each one must land in `UNKNOWNS.md`, never as an invented answer.
3. **Test the guardrail.** Run `persona` in `card` mode with no research. Correct: it refuses and asks for research. Defect: it writes a persona with names and quotes. Call the AIX-Lab support channel at once.
4. **Audit.** Run `audit` in mode `craft`, `heuristic`, `a11y`, `code` or `spec`. Mark each finding **accept**, **reject** or **unsure**. Nothing is fixed until you say so.
5. **Review.** Read what you produced, then reply to the message these guides came with, answering its five questions.

Design system how-tos (connect from Git, create foundations only, import from Figma) are in the Claude Code guide and the Claude Design sheet.

8. If something goes wrong

Problem	Fix
Typing `/aix-lab-atlas:` shows no skills (Claude Code)	Start a new session or type `/reload-plugins`. Then **Customize > Plugins** and check AIX Lab-Atlas is on.
No **Add marketplace** in **Customize > Plugins**	Update the Claude app and try again. Still missing: use fallback A5 in the Install guide, or call the AIX-Lab support channel.
Chat does not offer a skill	Type `/`, then `aix-lab-atlas`, or name the skill in your message.
A Claude Design command does nothing	Check Part B step B4 was done in this project and `skills/<name>/SKILL.md` exists.
A skill writes before showing a plan	Type: stop, show me your plan first. Tell the AIX-Lab support channel.
Claude asks for a password or token	Do not enter it. Stop and call the AIX-Lab support channel.
