Using the AIX Lab-Atlas skills

in Claude Code

Version	2
For	Designers using Claude Code in the Claude desktop app. No terminal needed. Setup takes about 10 minutes, once.
Source	https://github.com/RPalis/AIXLab-Atlas. This is a team guide, not an official Anthropic document.
Use	Internal. Do not share outside the team.

What you are setting up

The repository holds 30 skills, each a folder with a `SKILL.md` file. You copy those folders to one place on your computer, and Claude Code then runs any skill by name.

Step 1. Get the files

1. Open https://github.com/RPalis/AIXLab-Atlas and sign in to GitHub with the account that was invited.
2. Click the green **Code** button, then **Download ZIP**. Unzip it: on a Mac double-click the file; on Windows right-click it and choose **Extract All**.

> **CHECK** The unzipped folder contains a folder called `skills`.

Step 2. Copy the skills

1. Open the Claude desktop app (claude.com/download if you do not have it), sign in, open the **Code** tab once, then quit the app. This creates the folder you need.
2. Open your `.claude` folder. **Mac:** in Finder press **Cmd+Shift+G**, type `~/.claude`, and press Enter. **Windows:** press **Win+R**, type `%USERPROFILE%\.claude`, and press Enter.
3. If there is no folder called `skills`, create one and name it `skills` in lowercase (Mac: **File > New Folder**. Windows: right-click, **New > Folder**).
4. Open the unzipped download, open its `skills` folder, select all 30 folders (**Cmd+A** on a Mac, **Ctrl+A** on Windows), and drag them into the `skills` folder from step 3. If you are asked about folders that already exist, choose to replace them.

> **CHECK** The `skills` folder inside `.claude` holds 30 folders, and each one contains a file called `SKILL.md`.

Step 3. Check that Claude Code sees them

1. Open the Claude desktop app and the **Code** tab. Choose your project folder as the working folder.
2. Type `/` and look at the list.

CHECK The list includes skills such as `setup`, `brief`, `persona` and `audit`. If it shows none, quit the app completely, reopen it, and check Step 2.

NOTE `/help` is also a built-in Claude Code command, and the built-in wins. To run this suite's help, type: Use the AIX Lab-Atlas help skill. Every other skill name works as a slash command.

Step 4. Use a skill

Type a slash, the skill name, and an optional mode or idea, then send. Not sure where to start? Ask for the help skill. It reads your project's files and recommends the next one to three skills.

```
/brief an app to share weekly meal plans with housemates
/audit craft
Use the AIX Lab-Atlas help skill
```

The slash is optional: "Run the audit skill in craft mode" does the same thing. A skill that needs a mode asks for it if you do not give one.

Phase	Commands (modes in brackets)
Before Discover	`/setup`, `/brief`
Discover	`/workshop` [plan, ingest], `/competitor-analysis` [discover, add, analyse], `/ux-benchmark`, `/interview`, `/interview-analysis`, `/persona` [card, day], `/journey` [map, blueprint, pain-points, solutions, experience], `/problem-statement`, `/metrics`
Decide	`/brainstorming`, `/information-architecture`, `/map` [objects, site, flow, audit, document], `/interrogate`, `/decisions`
Design	`/prototype`, `/styleguide` [default, forge], `/audit` [craft, heuristic, code, spec, a11y], `/refine`, `/storybook`, `/figma` [capture, import, sync]
Deliver	`/usability-test-plan`, `/package` [full, lite], `/showcase`, `/guide`, `/requirements`
Any time	`/wiki` [compile, note], `/skill-manager`

Audit modes: `craft`, `heuristic`, `a11y`, `code`, `spec`. Audit only finds problems; run `/refine` to fix them.

Rules

- **Plan first.** Turn on plan mode (the mode selector near the prompt box, or Shift+Tab). Claude shows a plan and waits for your yes.
- **No invented evidence.** No made-up people, quotes, numbers or competitors. Missing facts go in `UNKNOWNS.md`. Label a guess as a guess and name the source of every finding.
- **Stay in scope.** Practise on an invented idea in a folder of your own, never client material. Never paste passwords, keys or tokens into a chat.

To enforce these, paste before a skill run:

```
Use only files in this project and the skill's own SKILL.md. Do not invent users, quotes,
numbers, competitors or screens. If something is missing, add it to UNKNOWNS.md and ask m
e.
Show me a plan first and wait for my yes before creating or changing files. Name the sourc
e
file for every finding. If you guess, say it is a guess.
```

How to: design systems

Foundations means colour, type, spacing, radius and shadow in light and dark, with no components.

1. Connect a design system from Git

1. Unzip the repository and choose its folder in the **Code** tab. For a React component library, type `/design-sync` and follow the prompts. A large library can take a long time and may ask you to confirm the cost. Then open claude.ai/design, check the system under **Settings > Design systems**, and turn on **Published**.
2. For any other code, type `/styleguide` and send: `Audit and document the design tokens in this project. Do not change any value.` Read the `DESIGN.md` it writes. Anything unclear goes on a line in `UNKNOWNS.md`.

2. Create a design system (foundations only)

1. Type `/styleguide` and send: `Foundations only: colour, typography, spacing, radius and shadow, light and dark. No components.` Add `Use forge mode.` for a real brand, and give it your sources: a website, a brand guide, or hex codes. If two sources disagree it asks which wins.
2. It writes `src/index.css`, the Tailwind mapping and `DESIGN.md`. With no project yet, it returns the text for you to save as files.

> **CHECK** No hard-coded colours outside `index.css`, and `DESIGN.md` exists. To pull a Figma library into tokens, use `/figma` with the connector the AIX-Lab support channel sets up once.

If something goes wrong

What you see	What to try
Typing `/` shows no skills	Quit Claude completely and reopen it. Check that your `.claude/skills` folder holds 30 folders.
`/help` opens Claude Code's own help	Type: Use the AIX Lab-Atlas help skill.
Anything else, or a skill writes before showing a plan	Type: stop, show me your plan first. Then call the AIX-Lab support channel.
