AIX Lab-Atlas

Onboarding: quick start (both tools)

Version	3
Repository	https://github.com/RPalis/AIXLab-Atlas. MIT licence.

1. Before you start

Item	Link
Claude Code: the Claude desktop app, signed in with a paid Claude plan (or a Console account). No terminal needed.	claude.com/download, claude.com/pricing
Claude Design: a Claude account on a plan with Claude Design (Pro, Max, Team or Enterprise; an Enterprise admin must enable it).	claude.ai/design
An empty folder called `atlas-practice` (Claude Code) and an **invented** product idea, for example an app to share weekly meal plans with housemates. Never a client idea.	Create the folder on your Desktop

2. Seven safety rules

- **G1** Work only in `atlas-practice`. **G2** Never paste passwords, keys, tokens or real user data; sign in to services in your browser.
- **G3** Keep Claude on "ask before editing"; never use bypass or auto-accept. **G4** Plan first: if a skill writes before showing a plan, type: stop, show me your plan first.
- **G5** No invented evidence: no persona, quote or number without a source, otherwise "unknown". **G6** Read each output before the next skill.
- **G7** Stop and call the AIX-Lab support channel if a file appears outside `atlas-practice`, Claude asks for a password or token, or you are stuck for 5 minutes.

3. Install and check

Every click is in the **Install click-by-click** guide. The short version:

Claude Code (desktop app, no terminal)

1. Open the Claude desktop app (claude.com/download), sign in, open the **Code** tab, and choose `atlas-practice` as the working folder. Turn on plan mode (the mode selector, or Shift+Tab).
2. Type this line and press Enter. Confirm if asked, then choose **Install for you (user scope)**: `/plugin install aix-lab-atlas --marketplace RPalis/AIXLab-Atlas`
3. Type `/aix-lab-atlas:help` and send.

> **CHECK** Typing `/aix-lab-atlas:` lists the skills, and `/aix-lab-atlas:help` names `/aix-lab-atlas:setup` for an empty folder. If nothing shows, type `/reload-plugins`. Every Claude Code command starts with `/aix-lab-atlas:`.

Claude Design

1. In a Claude Design project send: `Connect the GitHub repo RPalis/AIXLab-Atlas, branch main.`
2. Send: `Copy the whole skills/ folder from RPalis/AIXLab-Atlas into this project, keeping the folder structure.` If the project already has a `skills/` folder, delete it first so no old copy remains.
3. Send: `Create CLAUDE.md at the project root with exactly this text`, then paste the command rule from Part B of the Install click-by-click guide. Repeat in every new project.
4. Send: `/help atlas`.

> **CHECK** `skills/help/SKILL.md` exists and `/help atlas` lists the skills. Typing `/` shows no list in Claude Design: that is expected, the rule file makes the commands work. Skills that need a shell (`prototype`, `package`) need Claude Code.

4. First run: plan, execute, audit

1. **Plan.** Claude Code, in plan mode: `Use the setup skill. Project: <your invented idea>. Starting point: brand-new idea.` Claude Design: send `/brief <your idea>` instead. Read the plan. If it names anything outside `atlas-practice`, stop (G7). Approve each file change one at a time.

2. **Execute.** Run `brief`. Answer one question at a time; say "I don't know" when you do not. Each one must land in `UNKNOWNS.md`, never as an invented answer.
3. **Test the guardrail.** Run `persona` in `card` mode with no research. Correct: it refuses and asks for research. Defect: it writes a persona with names and quotes. Call the AIX-Lab support channel at once.
4. **Audit.** Run `audit` in mode `craft` (scored critique), `heuristic` (12-point usability pass), `a11y`, `code` or `spec`. In Claude Design, make one screen first. Mark each finding **accept**, **reject** or **unsure**. Nothing is fixed until you say so.
5. **Review.** Read what you produced, close the session, and reply to the message these guides came with, answering its five questions.

5. Design system how-tos (advice, never a blocker)

Situation	Claude Code	Claude Design
1. Connect from Git	React library: `/design-sync`. Any code: `/aix-lab-atlas:styleguide`, then "audit and document the tokens, change nothing".	**Settings > Design systems** > new > the GitHub repository. Then **Open > Remix** to review, test, **Published**.
2. Create, foundations only	`/aix-lab-atlas:styleguide` (placeholder) or with forge mode (real brand): "foundations only, no components".	Upload logo, colour file and type spec to a new design system and say "foundations only". Review in **Remix**, **Published**.
3. From Figma	`/aix-lab-atlas:figma` import, with the Figma connector set up once by the AIX-Lab support channel.	Figma **File > Save local copy**, upload the `.fig` plus fonts and logos to a new design system. Check components after.

Step by step, with checks: see the how-to sections in the Claude Code guide and the Claude Design sheet. Installing: see the Install click-by-click guide.

6. If something goes wrong

Problem	Fix
Typing `/aix-lab-atlas:` shows no skills (Claude Code)	Type `/reload-plugins`. Then `/plugin`, **Installed**, and check **aix-lab-atlas** is enabled.
A Claude Design command does nothing	Check step 3 was done in this project and `skills/<name>/SKILL.md` exists.
A skill writes before showing a plan	Type: stop, show me your plan first. Tell the AIX-Lab support channel.
Claude asks for a password or token	Do not enter it. Stop and call the AIX-Lab support channel.

> **NOTE** Connectors (MCP servers) are not needed for a first run.
